

nwcaching.co.uk

You are reading this notice because you have discovered a person taking part in a geocaching survey. Please do not be alarmed, this is a harmless test of current military technology.

Geocaching involves the utilisation of multi-billion pound satellite technology to locate the whereabouts of small containers, placed world wide. This is one of several methods of proving the usability of GPS architecture, including WAAS and EGNOS.

There are hundreds of thousands of small geocache containers across the globe. Generally, each container will be found by approximately 50 separate field visits. If you see a container, you are welcome to open it. It is harmless, but should be replaced exactly as found.

You can participate. Visit **www.geocaching.com** or alternatively your regional headquarters at **www.nwcaching.co.uk**
